EDUCATION

University of Illinois Urbana-Champaign, Champaign, IL

August 2023 - May 2027

Bachelor of Science in Computer Engineering, Minor in Business

Dean's List/James Scholar Honors | GPA: 3.79/4.0

Relevant Coursework: Computer Systems Engineering, Digital Systems Laboratory, Data Structures, AI, Applied Machine Learning, Database Systems, Computer Systems & Programming, Computing, Analog Signal Processing, Electronics, Discrete Structures

WORK EXPERIENCE

cliexa, *AI/ML Engineer Intern*, Denver, CO

May 2026 - August 2026

- Contributed to and improved Agent Zero, cliexa's autonomous clinical agent platform built with the Etienne framework: a Claude-powered web console with a .NET orchestrator and FastMCP servers exposing EHR data, patient APIs, and 36 clinical note schemas to AI agents that execute real clinical workflows
- Developed custom Claude skills that drove a 30% lift in team productivity; led client demos and partnered with the engineering team to translate clinical and product requirements into deployed AI features for healthcare partners including Mayo Clinic
- Shipped 100+ tickets spanning UI improvements, backend changes, and ML/LLM evaluation across the cliexa AI platform
- Architected a production LLM pipeline with LangGraph that converts clinical session transcripts into structured, compliant notes across 36+ document types, engineering prompt-caching for ~90% input-token reduction and a parallel fan-out layer that reduced end-to-end latency by 45%

Microsoft, *AI/ML Engineer Intern*, Istanbul, Turkey

June 2025 - August 2025

- Designed LSTM and GRU deep learning models in PyTorch for financial time series forecasting over engineered market features (momentum, volatility, rolling-window stats), driving a 15% improvement in short-term prediction accuracy
- Engineered data preprocessing, training, and evaluation pipelines on Azure ML for financial time series datasets, with sliding-window sampling, normalization, and reproducible experiment tracking
- Automated repetitive ML experimentation tasks with Python scripting on Azure compute, accelerating iteration across LSTM, GRU, and attention-based variants

Ernst & Young, *Consultant Trainee*, Istanbul, Turkey

July 2025 - August 2025

- Selected for EY's rigorous FutureReady program in the Data and Analytics consulting practice, gaining exposure to real-world client cases while building structured problem-solving and client-facing analytical skills
- Applied MECE decomposition, root-cause analysis, and hypothesis-driven frameworks to break down ambiguous business problems and deliver data-backed insights through executive-ready presentations

Vestel Electronics, *Software Engineering Intern*, Izmir/Manisa, Turkey

May 2024 - June 2024

- Optimized embedded TV software modules with a 6-engineer team, hardening and stabilizing core application-layer components shipped across production device lines
- Built an internal data processing tool to detect and compare image file changes in the TV software codebase, increasing debugging efficiency by 25% and reducing manual inspection overhead
- Modeled city-level retail expansion over historical sales data, applying statistical and predictive analysis to rank candidate regions for new store openings

LEADERSHIP EXPERIENCE

IEEE-Eta Kappa Nu (HKN) Honor Society, Student Services Committee Member, Champaign, IL

January 2025 - Present

- Led review sessions across Computing, Electronics, Analog Signal Processing, and Computer Systems & Programming, supporting 500+ students with exam readiness and course performance

Dale Carnegie Program, Scholar, Kansas City, MO

January 2024

- Earned the Highest Award of Achievement through intensive leadership and communication training across interactive classes, group activities, and presentations

SKILLS

Software Skills: Python, Java, C, C++, SQL, JavaScript, PyTorch, TensorFlow, scikit-learn, Pandas, NumPy, React, Node.js, Deep Learning (LSTM, GRU, Transformers), Microsoft Azure, Azure ML, Claude Code, Git/GitHub, JIRA, MECE Frameworks

Hardware Skills: Digital Systems Design, Verilog/SystemVerilog, FPGA Prototyping (Xilinx Vivado), Microprocessor and SoC Design, Circuit Analysis, Analog Signal Processing, Embedded Systems

Certifications: AI-Empowered SAFe® Product Owner / Product Manager (Scaled Agile, 2026); DALF C1 (Advanced French Proficiency); McKinsey Forward Program (McKinsey & Company, 2026)
